

What if your clinic had to close because of a water main break? Or you had to travel due to an emergency? What would you do, and where would you go?

Ask your Counselor TODAY about D-ATM

Don't miss your dose!

What is D-ATM?

Digital Access to Medication (D-ATM) is a computer system being provided to your opioid treatment program (OTP) by the Substance Abuse and Mental Health Services Administration (SAMHSA). Your OTP is one of the first to use D-ATM, though more programs will join D-ATM in the future.

What is D-ATM for?

D-ATM was created to ensure patients in OTPs receive treatment even in an emergency – with your dignity intact.

How does D-ATM work for you?

Let's say something happens and you can't get to your home clinic. By enrolling in D-ATM, you can go to another OTP, knowing they can provide you an accurate dose, while still protecting your privacy.

Ready to enroll?

Ask your counselor when and how you can enroll in D-ATM. And for more information, go to <http://www.datm.samhsa.gov>.

An emergency could be widespread or local. Either way, D-ATM will help make sure it doesn't become a disaster for you. For more information about D-ATM and how to enroll, please ask your clinic counselor.
